

AYDA RAJAB

Miami, FL • 305-439-4010 • ayda.rajab@outlook.com • linkedin.com/in/ayda-rajab • github.com/aydarajab

Software Engineer with 4+ years building and supporting web applications, RESTful APIs, and data-driven solutions in HIPAA-sensitive healthcare environments. Sole software engineer for a 5,000-employee healthcare organization, owning development end to end across the front end and back end for systems that process 8M+ records and serve 2,500+ users. Skilled in JavaScript and Python development, SQL performance tuning (50–70% execution improvements), AWS infrastructure (S3, EC2, Lambda), and healthcare data standards (HL7, FHIR, DICOM). Background in biomedical engineering and healthcare administration brings deep domain expertise to compliance-sensitive environments.

TECHNICAL SKILLS

Front-End: JavaScript, HTML, CSS, Retool, Power BI (DAX, Dataflows, Scheduled Refresh), Tableau, Responsive UI & Dashboard Development

Back-End & APIs: Python (Pandas, Regex, Scripting), RESTful API Design & Integration, ETL/Automation Workflows, Power Automate

Databases: MySQL, PostgreSQL, Stored Procedures, Query Optimization, Data Modeling

Healthcare Data: HL7, FHIR, DICOM, HIPAA Compliance

Cloud & DevOps: AWS (S3, EC2, Lambda, IAM), Git, GitHub Actions, GitLab CI, Jenkins, CI/CD Pipelines, SharePoint

Languages: JavaScript, Python, Java, SQL

Testing & Methodologies: Selenium, JMeter, Maven, Test Automation, QA Validation, Agile/Scrum, JIRA, Lean Six Sigma (Green Belt)

PROFESSIONAL EXPERIENCE

Software Engineer | [Key Autism Services](#), Miami, FL May 2023 – Present

Sole software engineer for a 5,000-employee healthcare organization — develop, enhance, and support web-based applications and technology solutions across the front end and back end for systems serving 2,500+ end users.

- Develop, test, and maintain web applications across the front end and back end using JavaScript and Python, ensuring solutions remain scalable, secure, and aligned with business objectives.
- Design and implement RESTful APIs and server-side functionality supporting workflows that process 8M+ records and serve 2,500+ end users.
- Build responsive, intuitive user interfaces and reporting views that deliver excellent user experiences, eliminating manual processes and recovering 30+ hours/month for operations teams.
- Create, optimize, and maintain MySQL data models and queries; redesigned stored procedures and implemented strategic indexing, cutting query execution times by 50–70%.
- Troubleshoot, debug, and resolve software defects and performance issues; drive testing and QA validation in a HIPAA-compliant environment, achieving a 99% error-free deployment rate.
- Collaborate with cross-functional stakeholders and product owners to gather requirements and translate business needs into technical solutions; participate in code reviews and uphold coding standards and best practices.
- Support application deployment, monitoring, and maintenance on AWS (S3, EC2, Lambda, IAM) with Git-based CI/CD workflows, and contribute to technical documentation and knowledge sharing.

Quality Engineering Analyst | [Accenture](#), San Antonio, TX Aug 2022 – May 2023

Promoted within 12 months. Owned test automation and quality engineering for 12+ federal applications in high-security environments.

- Maintained and enhanced Java-based Selenium and JMeter automation frameworks, streamlining regression and functional testing cycles across 12+ applications in federal compliance environments.
- Identified and resolved defects collaboratively with developers and PMs, reducing defect recurrence rates by 35% and improving release quality across the portfolio.
- Executed risk assessments and root cause analyses early in the development lifecycle, preventing 15+ critical defects from reaching production.

Test Automation Engineer | [Accenture](#), San Antonio, TX Aug 2021 – Aug 2022

- Designed and executed automated test scripts for functional, non-functional, and regression testing, supporting timely delivery of 12+ software releases with comprehensive coverage.

- Reduced defect resolution time by 25% by streamlining cross-team documentation and communication between QA, development, and project management.
- Aligned automation strategies with product roadmaps and release cycles, accelerating project delivery timelines by 25% through optimized resource allocation.

EDUCATION & CREDENTIALS

Master of Healthcare Administration (MHA) | University of Miami

Bachelor of Science in Biomedical Engineering | The Catholic University of America

Lean Six Sigma Green Belt | University of Miami
